

IBM Network Station Family of Thin Clients
Access for today, flexibility for tomorrow

Network Station Manager V2R1 Internals

August 29, 1999

Network Station Manager

NSM Internals

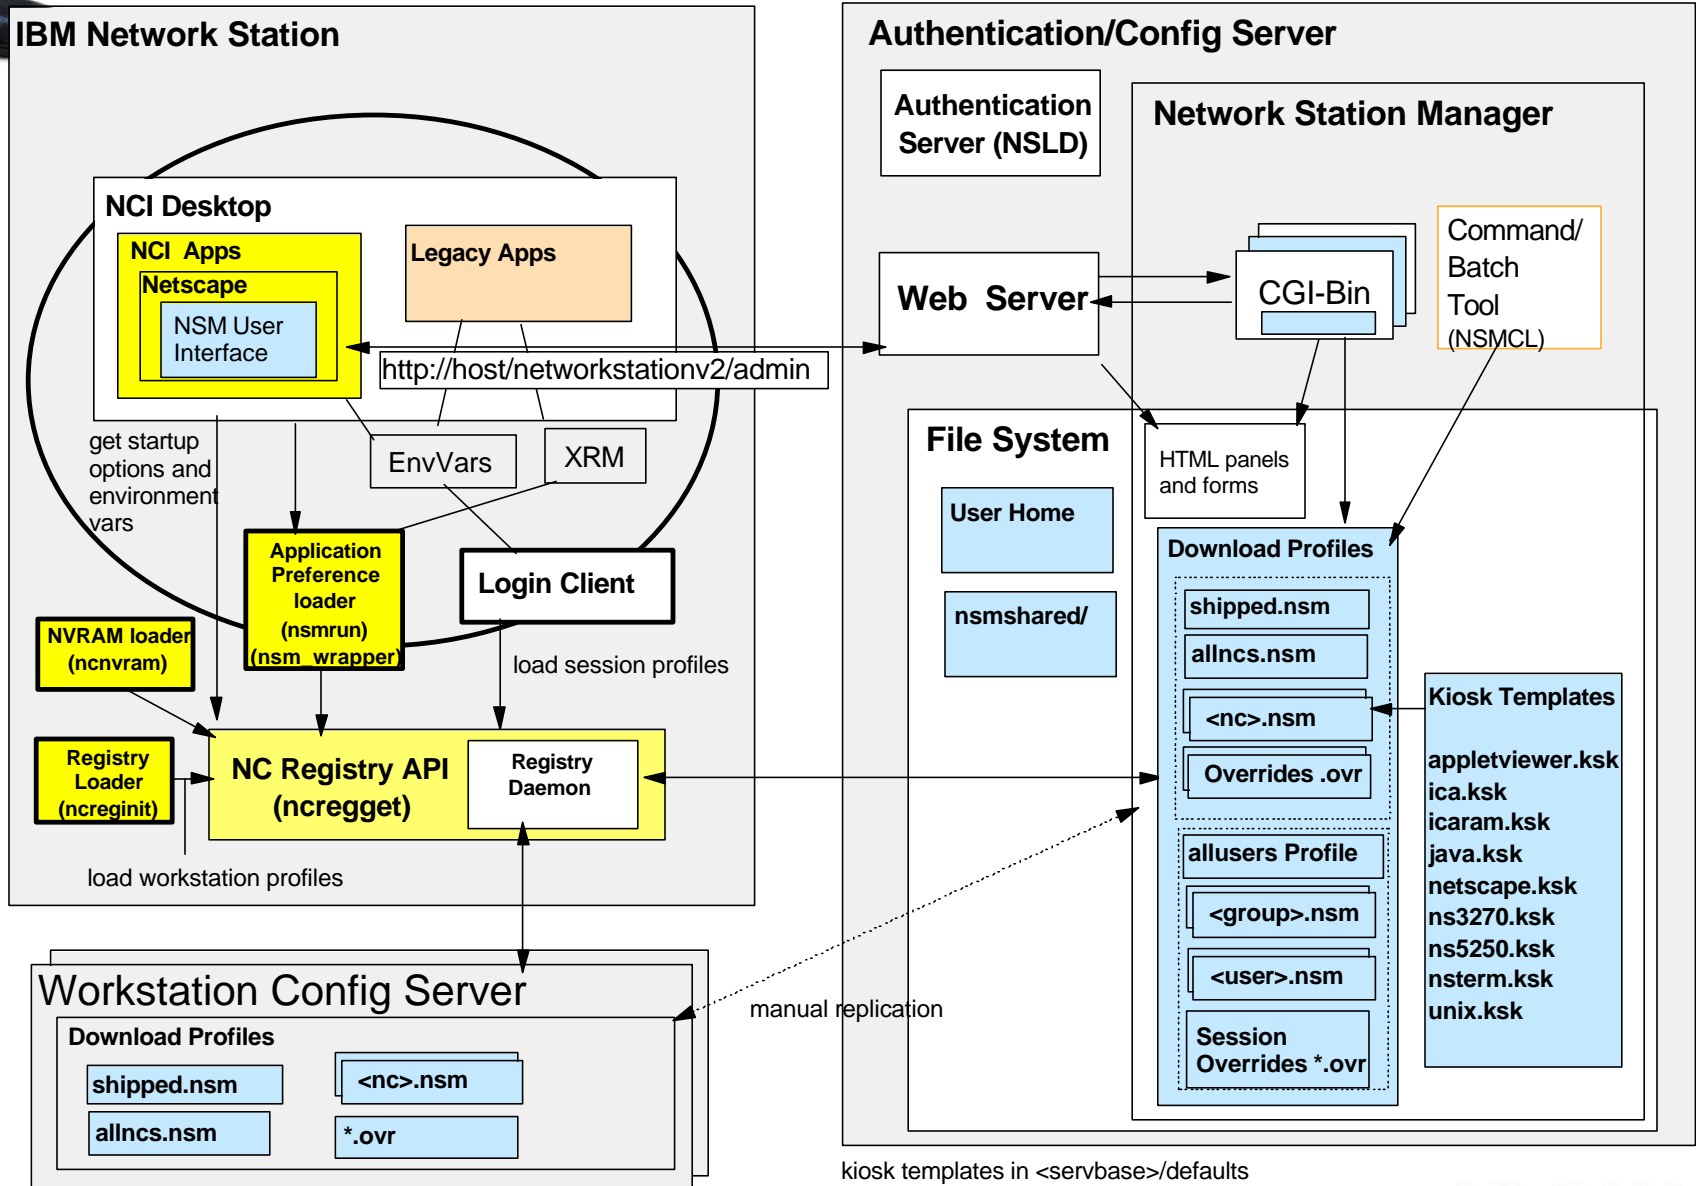

- **NSM / System Structure**

- **Directory Structure**
 - ▶ **Server Directories**
 - ▶ **Shipped Files and Directories**
 - ▶ **User Data Files and Directories**

- **Download Profiles**
 - ▶ **Basic Information**
 - ▶ **Location**
 - ▶ **File Descriptions**
 - ▶ **Download Order**
 - ▶ **Preference Hierarchy**
 - ▶ **XML Content**
 - ▶ **Kiosk Templates**

Network Station Manager

NSM / System Structure

kiosk templates in <servbase>/defaults
 download profiles in <userbase>/profiles or appropriate subdirectory

Network Station Manager

Directory Structure - Server Directories

Platform	HTTPBASE directory
AS/400	/QIBM/ProdData/HTTP/Protect/NetworkStationV2
Windows NT	X:(float)\NetworkStationV2\servbase\html
AIX	/usr/NetworkStationV2/servbase/html

Platform	PRODBASE directory
AS/400	/QIBM/ProdData/NetworkStationV2
Windows NT	X:(float)\NetworkStationV2\prodbase
AIX	/usr/NetworkStationV2/prodbase

Platform	SERVBASE directory
AS/400	/QIBM/ProdData/NetworkStationV2/nsm
Windows NT	X:(float)\NetworkStationV2\servbase
AIX	/usr/NetworkStationV2/servbase

Platform	USERBASE directory
AS/400	/QIBM/UserData/NetworkStationV2
Windows NT	X:(float)\NetworkStationV2\userbase
AIX	/usr/NetworkStationV2/userbase

Network Station Manager

Directory Structure Shipped Files and Directories

Directory	Description
PRODBASE/	Base directory for shipped files
PRODBASE/x86/	Base directory for shipped X86 client files
PRODBASE/ppc/	Base directory for shipped PPC client files
SERVBASE/	Base directory for shipped files used by server programs
SERVBASE/defaults/	Directory for NSM shipped defaults
shipped.nsm	Download profile containing backup version of NSM shipped preferences
allusers.nsm	Download profile containing backup version of default system-wide NSM launchbar preferences
allncs.nsm	Download profile containing backup version of default system-wide NSM hardware preferences
<application>.ksk	Kiosk templates
SERVBASE/tmpls/	Directory containing NSM HTML templates (used by the CGIs)
SERVBASE/tmpls/<locale>/	Directory containing language-specific HTML templates
HTTPBASE/	Directory containing NSM HTML files
HTTPBASE/<locale>/	Directory containing language-specific HTML files

Network Station Manager

Directory Structure

User Data Files and Directories

Directory	Description
USERBASE/	Base directory for user data
USERBASE/profiles/	Directory for NSM download profiles
shipped.nsm	NSM shipped profile for all NCs and users
allusers.nsm	NSM managed system-wide profile for all users
allncs.nsm	NSM managed system-wide profile for all NCs
allusers.ovr	System-wide override profile for all users
USERBASE/profiles/NCs/	Directory for NSM terminal specific download profiles
<ncid>.nsm	NSM managed NC specific profile
<ncid>.ovr	NC specific override profile
USERBASE/profiles/users/	Directory for NSM user specific download profiles
<userid>.nsm	NSM managed user specific profile
<userid>.ovr	User specific override profile
USERBASE/profiles/groups/	Directory for NSM group specific download profiles
<groupid>.nsm	NSM managed group specific profile
<groupid>.ovr	Group specific override profile

Network Station Manager

Directory Structure

User Data Files and Directories (continued)

Directory	Description
USERBASE/home/	Network Station home directory
USERBASE/home/<userid>/	User's Network Station home directory
USERBASE/nsmshared/	NSM shared data directory
USERBASE/nsmshared/<userid>/	User's NSM shared data directory
USERBASE/nsmshared/<userid>/NS5250/	User's shared 5250 directory
USERBASE/nsmshared/<userid>/NS3270/	User's shared 3270 directory
USERBASE/nsmshared/<userid>/NSTERM/	User's shared NS Terminal directory
USERBASE/flash/	Directory containing configuration files for the NSM Flash Manager and files to be placed on a flash card image

Network Station Manager

Download Profiles

■ Basic Information

- ▶ Used to store all NSM-saved preferences
- ▶ Read into the Network Station registry, which is accessed by the OS and all client apps to retrieve preferences
- ▶ Stored in a XML format
- ▶ Encoded in UTF-8 code page

■ Location

- ▶ Profiles are accessed by the registry in the server directory `USERBASE/profiles` on the terminal and user configuration servers.
- ▶ Backup copies of shipped default files and kiosk templates are stored in the directory `SERVBASE/defaults`.

Network Station Manager

Download Profiles

■ Files

▶ **shipped.nsm**

- located in USERBASE/profiles on terminal config server
- contains shipped default preference values
- should never be edited by a user or administrator
- backup copy in SERVBASE/defaults

▶ **allncs.nsm**

- located in USERBASE/profiles on terminal config server
- contains system-wide settings for all Network Stations that use the terminal config server
- shipped version of this file contains default values for printers
- backup copy of IBM shipped version in SERVBASE/defaults

▶ **allusers.nsm**

- located in USERBASE/profiles on user config server
- contains system-wide setting of all users that use the user config server
- shipped version of this file contains the IBM shipped launchbar setup
- back copy of IBM shipped version in SERVBASE/defaults

Network Station Manager

Download Profiles

■ Files (continued)

▶ <groupid>.nsm

- located in USERBASE/profiles/groups on the user config server
- contains the preferences for the group named <groupid>

▶ <userid>.nsm

- located in USERBASE/profiles/users on the user config server
- contains the preferences for the user named <userid>

▶ <ncid>.nsm

- located in USERBASE/profiles/NCs on the terminal config server
- contains the preferences for the Network Station named <ncid>
- <ncid> can be either the fully qualified domain name, the IP address, or the MAC address of the Network Station

▶ allusers.ovr, <userid>.ovr, <groupid>.ovr, and <ncid>.ovr

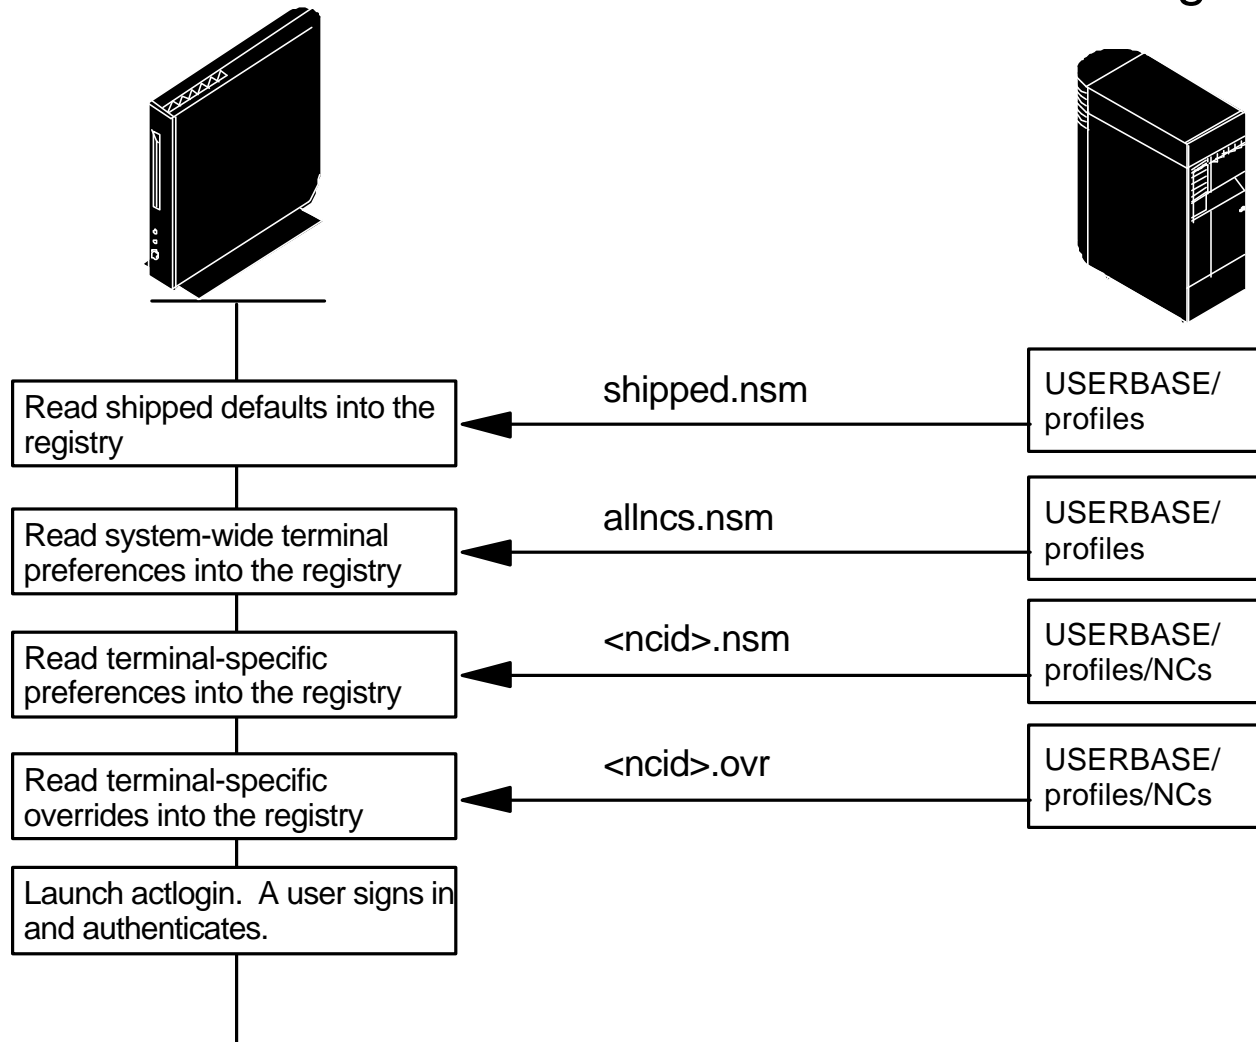

- override files for users and Network Stations
- located in the same directories as their corresponding .NSM files
- these can be hand-editted, and are the only files that should be hand-editted
- should only be used if absolutely necessary

Network Station Manager

Download Order - Phase 1

Network Station

Terminal Config Server

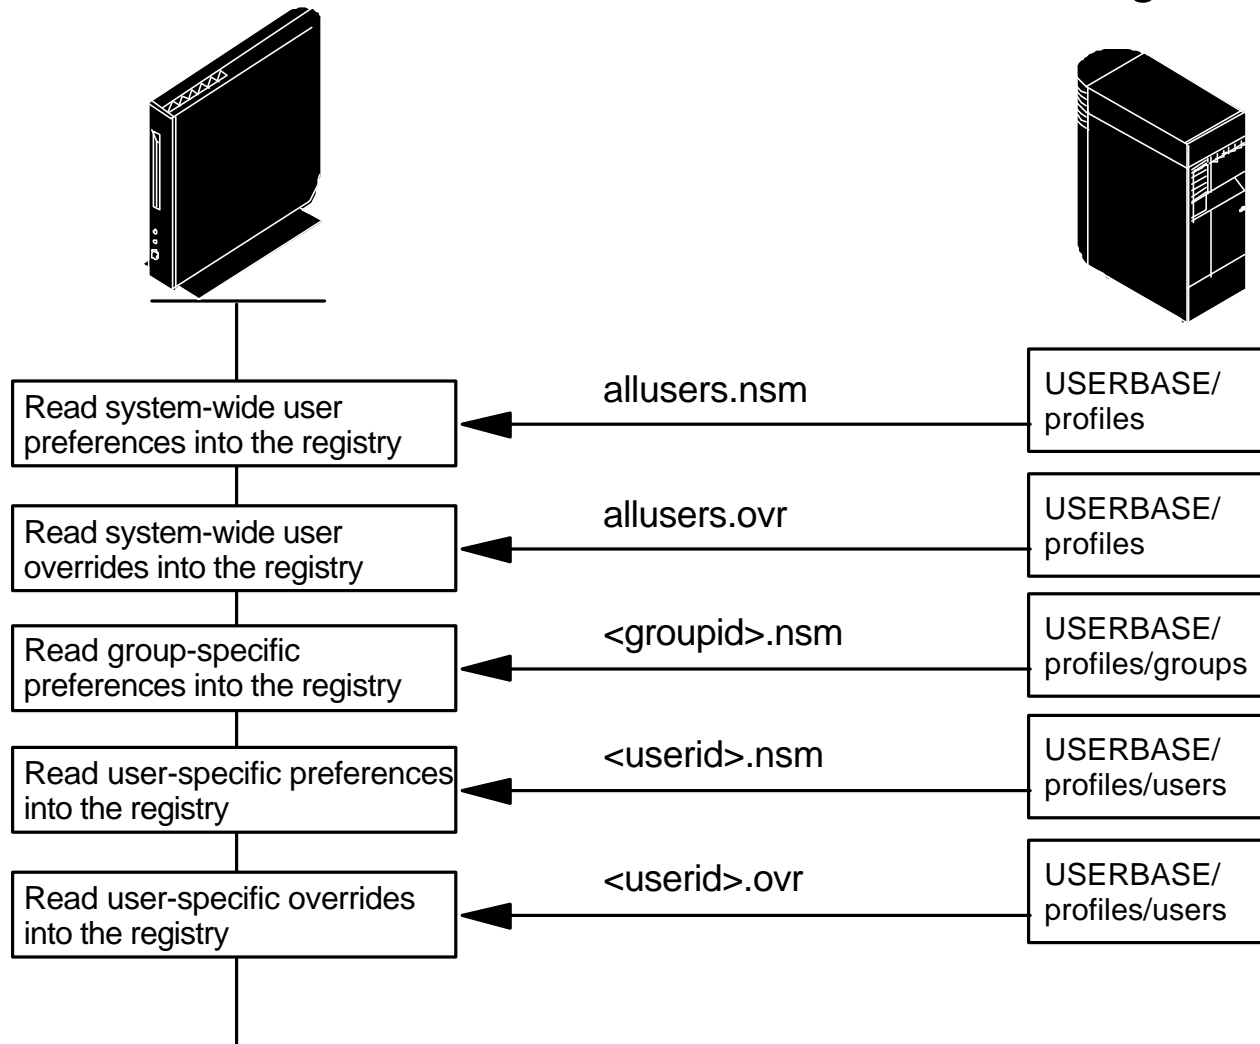

Network Station Manager

Download Order - Phase 2

Network Station

User Config Server

Network Station Manager

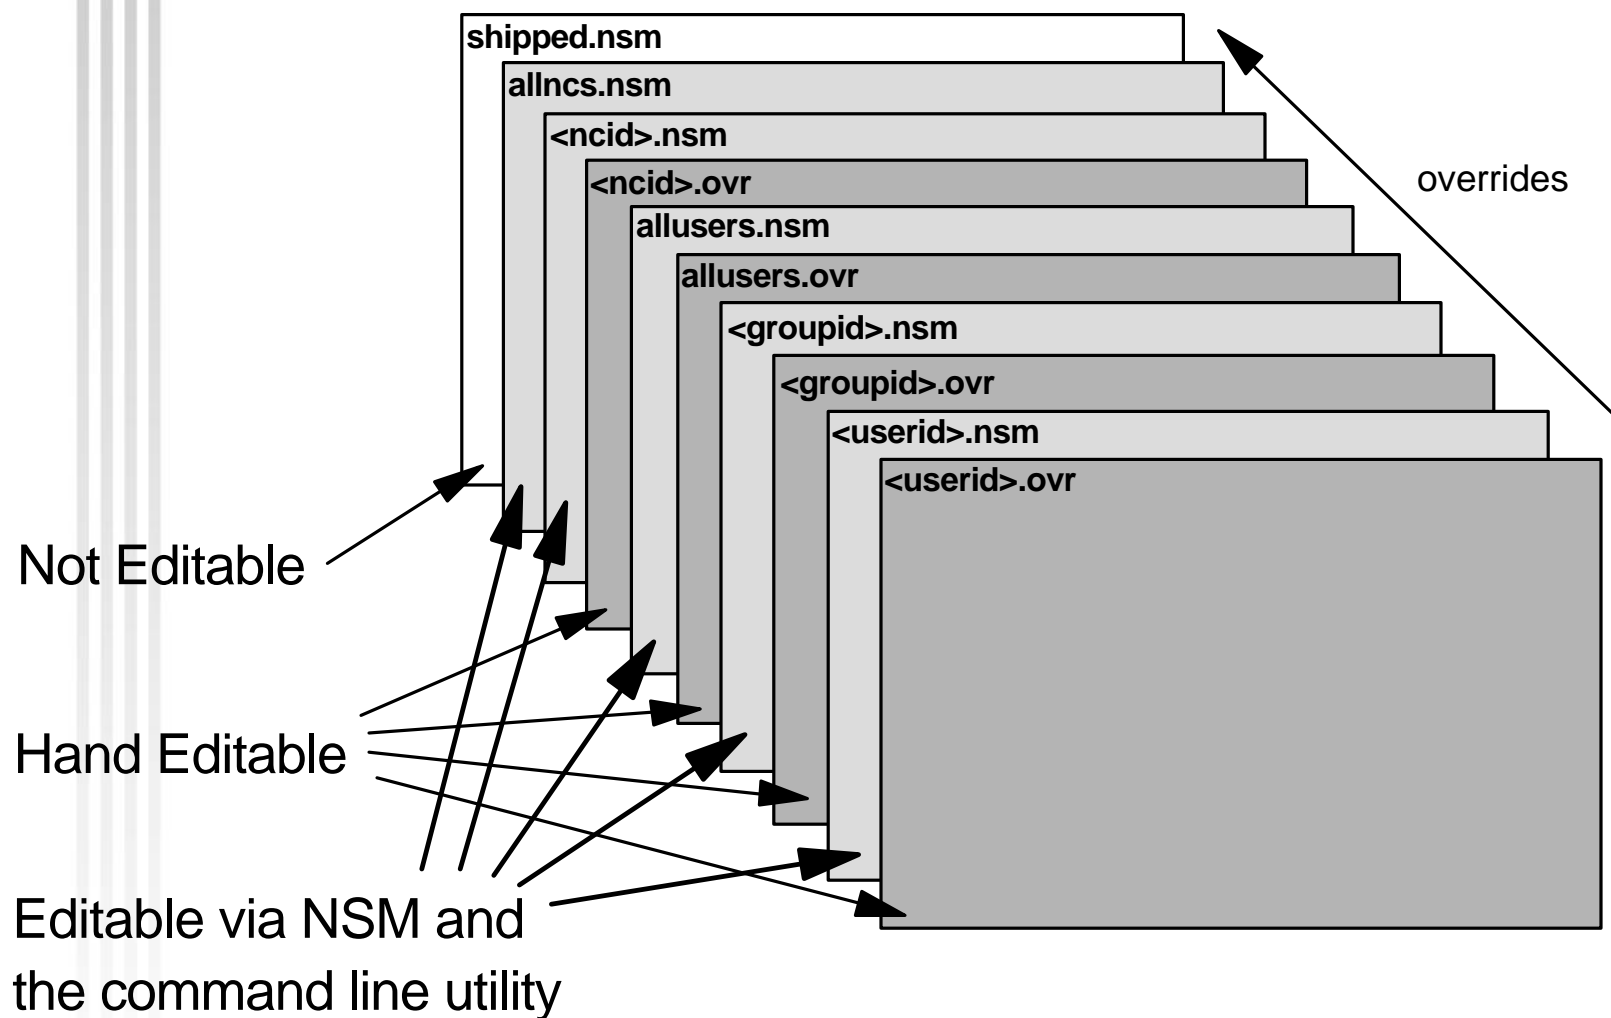

Download Order - Configuration Values

- **Configuration values that alter the download sequence:**
 - ▶ **RULES preferences (set in the RULES category using the command line utility)**
 - NSM_ALLOW_OVERRIDES - if this is DISABLE (the default), override (.ovr) files will not be read.
 - NSM_NC_NAME_TYPE - can be ANY, IP_ADDRESS, MAC_ADDRESS, HOST_NAME. Determines the naming convention for <ncid> files that must be used. ANY (the default) means that any of the three can be used.
 - NSM_ACCESS_NC_CONFIG - if this is DISABLE, <ncid>.nsm and <ncid>.ovr files will not be read.
 - NSM_ACCESS_GROUP_CONFIG - if this is DISABLE, <groupid>.nsm and <groupid>.ovr files will not be read.
 - NSM_ACCESS_USER_CONFIG - if this is DISABLE, <userid>.nsm and <userid>.ovr files will not be read.
 - ▶ **NSM_KIOSK_MODE environment variable**
 - If this is "ON", the login panel is bypassed, no authentication is done, and none of the files from the user config server are read.

Network Station Manager

Kiosk Templates

■ Basic Information

- ▶ Application-specific download profile templates
- ▶ Bring up a single application instance, bypass the login panel
- ▶ Located in **SERVBASE/defaults** and named **<appname>.ksk**
- ▶ To use a template, copy it to **USERBASE/profiles/NCs** and name it **<ncid>.nsm** or **<ncid>.ovr**
- ▶ Some templates require editing before they can be used

■ Shipped Templates

- ▶ **appletviewer.ksk** - Java Applet
- ▶ **ica.ksk** - ICA Connection
- ▶ **icaram.ksk** - ICA Remote Application Manager
- ▶ **java.ksk** - Java Application
- ▶ **netscape.ksk** - Netscape Browser
- ▶ **ns3270.ksk** - 3270 Emulator
- ▶ **ns5250.ksk** - 5250 Emulator
- ▶ **nsterm.ksk** - VT Emulator
- ▶ **unix.ksk** - XTerm
