

# SPEED

## Slip in a Hypertec accelerator board and turn your PC into a speed machine.

*HYPERTEC*

With such a comprehensive range to choose from, you can speed up your PC between 4 and 7 times. Decide how fast you want to go, then select the Hypertec accelerator board to suit.

| Product                           | PC Type                                 | Clock Speed | Memory                            | Special Features  |
|-----------------------------------|---|-------------|-----------------------------------|---|
| Hyperace 286 Plus                 | IBM PCs and 8088-based true compatibles | 10MHz       | N/A                               | Pop-up menu for speed control   |
| Hyperace 286 Super Plus           | IBM PCs and 8088-based true compatibles | 12.5MHz     | N/A                               | Pop-up menu for speed control   |
| Hyperace 286 Mega Plus            | IBM PCs and 8088-based true compatibles | 16MHz       | N/A                               | Pop-up menu for speed control   |
| Hyperace II-10                    | 8088 and 8086-based PCs and compatibles | 10MHz       | N/A                               | Pop-up menu Auto slowdown LIM 4 support                                       |
| Hyperace II-12                    | 8088 and 8086-based PCs and compatibles | 12.5MHz     | N/A                               | Pop-up menu Auto slowdown LIM 4 support                                       |
| Hyperace II-16                    | 8088 and 8086-based PCs and compatibles | 16MHz       | N/A                               | Pop-up menu Auto slowdown LIM 4 support                                       |
| Hyperformance<br><i>LONG SLOT</i> | 8088 and 8086-based PCs                 | 12.5MHz     | 1Mb, 2Mb piggyback also available | Pop-up menu Programmable auto slowdown RAM disk, disk caching, print spooling |

### And now available is the new Hyperace II range.

These new boards run equally brilliantly in 8088 and 8086-based PCs and compatibles including the IBM PS/2 Model 30, Olivetti M24 and Amstrad PC.

All our accelerator boards feature our pop-up menu for fingertip speed control — no switches to set. The Hyperace II range and Hyperformance also include automatic

slowdown to match speed with slower peripherals.

As with all Hypertec products, our accelerator range sets the highest standards for quality, performance and value. Plus a bonus — Australian design and full support right here on your doorstep.

Whichever way you look at it, we're fast!
